

Y3

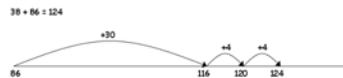

Addition

Children will continue to use bead strings and empty number lines with increasingly large numbers, including compensation where appropriate.

$$33 + 67 = 100$$

Count on from the largest number and partition the smaller one irrespective of the order of the calculation. Add

✓ Compensation

Children will begin to use informal pencil and paper methods (jottings) to support, record and explain partial mental methods building on existing mental strategies.

Estimate the answer to a calculation and use inverse operations to check answers.

Adding the least significant digits first.

$$\begin{array}{r} 67 \\ + 24 \\ \hline 11 \text{ (7 + 4)} \\ 80 \text{ (60 + 20)} \\ \hline 91 \end{array} \qquad \begin{array}{r} 267 \\ + 85 \\ \hline 12 \text{ (7 + 5)} \\ 140 \text{ (60 + 80)} \\ \hline 200 \\ \hline 352 \end{array}$$

Leading to adding numbers with up to three digits using formal methods of columnar addition.

$$\begin{array}{r} 367 \\ +185 \\ \hline 552 \\ \hline 11 \end{array}$$

Encourage children to add mentally by using real life contexts and money.

Including:

Adding a three digit number and ones

Adding a three digit number and tens

Adding a three digit number and hundreds

Subtraction

Children will continue to use empty number lines with increasingly large numbers.

Children will begin to use informal pencil and paper methods (jottings).

✓ Partitioning and decomposition

- Partitioning - demonstrated using arrow cards
- Decomposition - base 10 materials

NOTE When solving the calculation $89 - 57$, children should know that 57 **does NOT EXIST AS AN AMOUNT** it is what you are subtracting from the other number. Therefore, when using base 10 materials, children would need to count out only the 89.

$$\begin{array}{r} 89 \\ - 57 \\ \hline \end{array} = \begin{array}{r} 80 + 9 \\ - 50 + 7 \\ \hline 30 + 2 = 32 \end{array}$$

✓ Begin to exchange.

$$\begin{array}{r} 71 \\ - 46 \\ \hline \end{array}$$

Step 1 $\begin{array}{r} 70 + 1 \\ - 40 + 6 \\ \hline \end{array}$

Step 2 $\begin{array}{r} 60 + 11 \\ - 40 + 6 \\ \hline 20 + 5 = 25 \end{array}$

The calculation should be read as e.g. take 6 from 1.

This would be recorded by the children as:

$$\begin{array}{r} 70 + 1 \\ - 40 + 6 \\ \hline 20 + 5 = 25 \end{array}$$

Where the numbers involved in the calculation are close together or near to multiples of 10, 100 etc counting on using a number line should be used.

$$102 - 89 = 13$$

Multiplication

Children will continue to use:

✓ Repeated addition

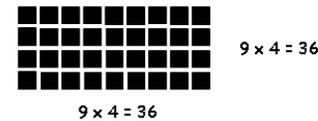

4 times 6 is $6 + 6 + 6 + 6 = 24$ or 4 lots of 6 or 6×4

Children should use number lines or bead bars to support their understanding.

✓ Arrays

Children should be able to model a multiplication calculation using an array. This knowledge will support with the development of the grid method.

x = signs and missing numbers

Continue using a range of equations as in Year 2 but with appropriate numbers.

✓ Scaling

e.g. Find a ribbon that is 4 times as long as the blue ribbon

✓ Using symbols to stand for unknown numbers to complete equations using inverse operations

$$\square \times 5 = 20 \qquad 3 \times \triangle = 18 \qquad \square \times \circ = 32$$

✓

✓ Partitioning

Doubling multiples of 5 up to 50.

Through doubling, connect the 2, 4, and 8 times tables.

$$35 \times 2 = 70$$

Partition

X	30	5	
2	60	10	=70

Division

Ensure that the emphasis in Y3 is on grouping rather than sharing.

Children will continue to use:

✓ Repeated subtraction using a number line

Children will use an empty number line to support their calculation.

$$24 \div 4 = 6$$

Children should also move onto calculations involving remainders.

$$13 \div 4 = 3 \text{ r } 1$$

✓ Using symbols to stand for unknown numbers to complete equations using inverse operations

$$26 \div 2 = \square \qquad 24 \div \triangle = 12 \qquad \square \div 10 = 8$$

Addition

How much would a Freddo bar and a chocolate bar cost altogether? What if we bought two of each?

Number Spinners
Counting on

Subtraction

Multiplication

Use known facts and place value to carry out simple

multiplications

$$\begin{aligned} 38 \times 5 &= (30 \times 5) + (8 \times 5) \\ &= 150 + 40 \\ &= 190 \end{aligned}$$

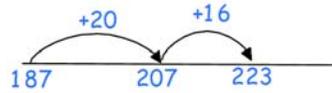

Division

Y4

Addition

Keep the largest number whole and partition smaller number

$$187 + 36 = 223$$

Using a written method

$$\begin{array}{r} 366 \\ + 458 \\ \hline 14 \\ 110 \\ 700 \\ \hline 824 \end{array}$$

Use the formal written method and carry below the line.

$$\begin{array}{r} 625 \\ + 48 \\ \hline 673 \\ 1 \end{array} \qquad \begin{array}{r} 783 \\ + 42 \\ \hline 825 \\ 1 \end{array} \qquad \begin{array}{r} 367 \\ + 85 \\ \hline 452 \\ 11 \end{array}$$

Using similar methods, children will:

- add several numbers (up to four digit) with different numbers of digits;
- begin to add two or more three-digit sums of money, with or without adjustment from the pence to the pounds;
- know that the decimal points should line up under each other, particularly when adding or subtracting mixed amounts, e.g. £3.59 + 78p.

Decimal Number Line
Measuring Cylinder
Measuring Scales
Thermometer
Number Spinners

Subtraction

Partitioning and decomposition

$$754 =$$

$$\begin{array}{r} 700 + 50 + 4 \\ - 86 \\ \hline \end{array}$$

$$\begin{array}{r} 700 + 40 + 14 \\ - 80 + 6 \\ \hline \end{array} \quad (\text{adjust from T to U})$$

$$\begin{array}{r} 600 + 140 + 14 \\ - 80 + 6 \\ \hline 600 + 60 + 8 = 668 \end{array} \quad (\text{adjust from H to T})$$

This would be recorded by the children as

$$\begin{array}{r} 600 + 140 + 14 \\ - 80 + 6 \\ \hline 600 + 60 + 8 = 668 \end{array}$$

Decomposition

$$\begin{array}{r} 614.1 \\ - 86 \\ \hline 668 \end{array}$$

Children should:

- be able to subtract numbers with different numbers of digits (up to 4);
- using this method, children should also begin to find the difference between two three-digit sums of money, with or without 'adjustment' from the pence to the pounds;
- know that decimal points should line up under each other.

$$\begin{array}{r} \text{£}8.95 \\ - \text{£}4.38 \\ \hline \end{array} = \begin{array}{r} 8 + 0.9 + 0.05 \\ - 4 + 0.3 + 0.08 \\ \hline \end{array} \quad \text{leading to} \quad \begin{array}{r} 8.85 \\ - 4.38 \\ \hline \end{array}$$

$$= \begin{array}{r} 8 + 0.8 + 0.15 \\ - 4 + 0.3 + 0.08 \\ \hline 4 + 0.5 + 0.07 \\ \hline \end{array} \quad (\text{adjust from T to U}) \quad \begin{array}{r} 8.85 \\ - 4.38 \\ \hline \end{array}$$

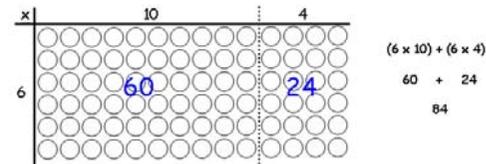

$$= \text{£}4.57$$

Multiplication

Count in multiples of 6, 7, 9, 25 and 1000.

Recall multiplication tables facts up to 12 x 12.

Children will continue to use arrays where appropriate leading into the grid method of multiplication.

Grid method

TU x U

(Short multiplication - multiplication by a single digit)

23 x 8

Children will approximate first

23 x 8 is approximately 25 x 8 = 200

$$\begin{array}{r} \times 20 \quad 3 \\ 8 \quad \boxed{160} \quad \boxed{24} \\ \hline 160 \\ + 24 \\ \hline 184 \end{array}$$

Division

Children will develop their use of repeated subtraction to be able to subtract multiples of the divisor. Initially, these should be multiples of 10s, 5s, 2s and 1s - numbers with which the children are more familiar.

$$72 \div 5$$

Moving onto:

Then onto the vertical method:

Short division TU ÷ U

$$72 \div 3$$

$$\begin{array}{r} 3 \overline{) 72} \\ - 30 \\ \hline 42 \\ - 30 \\ \hline 12 \\ - 6 \\ \hline 6 \\ - 6 \\ \hline 0 \end{array} \quad \begin{array}{l} 10x \\ 10x \\ 2x \\ 2x \\ 2x \end{array}$$

Answer : 24

Leading to subtraction of other multiples.

$$96 \div 6$$

$$\begin{array}{r} 16 \\ 6 \overline{) 96} \\ - 60 \\ \hline 36 \\ - 36 \\ \hline 0 \end{array} \quad \begin{array}{l} 10x \\ 6x \end{array}$$

Answer : 16

Any remainders should be shown as integers, i.e. 14 remainder 2 or 14 r 2.

Children need to be able to decide what to do after division and round up or down accordingly. They should make sensible decisions about rounding up or down after division.
